

# ARM BED

*Butler Beds*

---

*Butler Beds*

**Arm Bed**

**Thank you for purchasing a Butler Arm Bed.**

**TO THE OWNER OR OPERATOR:**

As with all Harper products, the Butler Beds have been thoroughly tested and built to provide a sturdy, dependable product. The Arm Bed is equipped with live hydraulics, which allows it to be used for a wide range of lifting and hauling tasks. This manual is written as an aid to operating and maintaining the Butler Arm Bed. Read and understand the manual thoroughly before operation to avoid damage to the unit or injury to the operator or bystanders.

An Arm Bed can present hazards to an operator who follows unsafe procedures in either the operation or maintenance of the unit. Therefore, **SAFETY WARNINGS** are present at certain locations in the text. Harper Industries is not responsible for accidents or injuries that result from the misuse or lack of maintenance of the Flatbed.

**SYMBOL:**

**SAFETY WARNING!**

**MEANING:** Failure to understand and obey this warning may result in injury to you or others. Whenever this symbol is used, please pay very close attention to the information presented, and make sure you fully understand. If you do not, contact your dealer or Harper Industries for clarification.

## Statement of Warranty

Harper Industries, Inc. (HII) warrants to each purchaser of a new Butler Bed from an authorized dealer or representative, that such equipment is free of manufacturer's defects in workmanship and materials which appear while in normal service for a period of ONE YEAR commencing with delivery to the original user.

The obligation of HII under this warranty is expressly limited, at our option, to replacement or repair at a service facility designated by Harper Industries or at the manufacturing plant in Harper, KS. A part will be replaced after inspection discloses it to have been defective. This warranty does not apply to defects caused by damage or unreasonable use (including failure to provide reasonable and necessary maintenance, or by performing functions without genuine Butler Bed accessories) while in the possession of the consumer.

Warranty is limited to parts, labor and ground freight delivery of replacement parts. Labor for repair to hydraulic and electrical power systems from HII installed with bed purchase/installation is covered under this warranty. HII shall not be liable for the consequential damages of any kind, including but not limited to consequential labor costs or transportation charges in connection with replacement or repair of defective parts.

This warranty does not apply to parts subjected to misuse, abuse, alteration, improper or inadequate maintenance, or normal wear.

Harper Industries makes no warranty with respect to trade accessories. They are subject to the warranties of their respective manufacturers.

ANY IMPLIED OR STATUTORY WARRANTIES, INCLUDING ANY WARRANTY OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE EXPRESSLY LIMITED TO THE DURATION OF THIS WRITTEN WARRANTY. HII makes no other express warranty, nor is anyone authorized to make any on behalf of HII.

For further information please contact your nearest Butler Bed dealer.

## Hydraulic System Specifications

HYDRAULIC SYSTEM	Electric over hydraulic
SYSTEM PRESSURE	2800 psi
FLOW	3.32 gpm @ 500 psi: 1.38 gpm @ 2750 psi
OIL RESERVOIR CAPACITY	10 quarts ATF fluid (Dextron III)
CYLINDER, SQUEEZE	1.125" X 2.5" X 6.0" Rephasing 1.125" X 2.75" X 6.0" Rephasing
CYLINDER, LIFT	1.25" X 3" X 20"
LIFT CAPACITY (centered)	2,500 lbs.

## Protective Coating Specifications

PAINT	Heat-cured, polyurethane based paint
-------	--------------------------------------

## Feature Identification

**A. Headache Rack** – protects the rear pickup window.

**B. Across-the-bed Toolbox (not pictured)**

**C. Spinners** – used to unroll hay.

**D. Squeeze Arms** – squeeze together to grip the bale and lift it onto the flatbed. When the arms are stored they serve as side rails for the flatbed.

**E. Crosstube or Pivot** – houses the squeeze cylinder and guides the squeeze arms.

**F. Hitch Plate** – allows for a 2" square receiver hitch and has holes for hitch pins.

**G. Safety Chain Loops** – always use safety chains when towing.

**H. Gooseneck Hitch** – located under a cover plate in the middle of the bed or as a pop up ball.

**I. Safety Chain Loops** – always use safety chains when towing.

**J. Lights** – LED lighting for stop-tail-turn. (Optional lights in headache rack)

**K. Toolboxes** – mount under front of bed on both sides. The Electric/Hydraulic Power unit mounts inside the passenger side toolbox.

**L. Side rails or Dummy Arms** – serve as side rail along with squeeze arms.

**M. Work Lights (optional)** – lights can be used when working at night.

**SAFETY WARNING!**  
Do not stand under the squeeze arms when operating the bale pickup unit, even when arms are empty.

# Safety Guidelines

Operator safety is of upmost concern when designing and developing a new piece of equipment. Designers and manufacturers build in as many safety features as possible. However, every year many accidents occur which could have been avoided by a few seconds of thought and a more careful approach to handling equipment. Most accidents can be avoided by observing the precautions in this section. To avoid personal injury, study the safety warnings and cautions listed in this manual and follow them.

## General Equipment Safety

- This equipment can be dangerous to children and persons unfamiliar with its operation. The operator should be a responsible adult familiar with farm machinery and trained for this unit.
- Do not attempt to operate equipment under the influence of drugs or alcohol.
- Do not allow persons to operate or assemble this unit until they have read this manual and have developed a thorough understanding of the safety precautions and how the unit works.
- Review the safety warnings and cautions with all users annually.

If you have any questions not answered in this manual or require additional copies, contact your dealer or Harper Industries.

## Arm Bed Operation Safety

- Replace any CAUTION, WARNING, DANGER or instruction decal that is not readable or is missing.
- Make sure all safety pins are in place and flatbed mounting bolts are secure to the truck frame.
- Make sure hinges, joints, and sliding parts are well greased, especially during off season to prevent rusting and binding.

- Check with truck dealer for any load limits, additional suspension or tire requirements. The arm bed's lifting capability may exceed the truck's load capacity in some instances.

## Hydraulic Safety

### SAFETY WARNING!

Hydraulic system operates under high pressure and escaping fluid can penetrate the skin.

# Operating Instructions

## Loading Instructions

- Back truck up to bale with arms open wide.
- Center spikes (spinners) as close as possible to center of bale.
- Squeeze the bale by pushing the IN button on the controller.
- Lift the bale by pushing the UP button on the controller.
- If you are loading 2 bales, release bale once backed up to the 2nd bale.

### CAUTION

**DO NOT DROP THE BALE ON THE TRUCK.**  
Damage to the frame and suspension can result from a dropped bale.

- Repeat to load a second bale.
- Maintain pressure on second bale during transport.

### CAUTION

**When hauling one bale make sure there is down pressure on the bale to keep it from moving. Do not release the arms. Maintain constant steady pressure. When hauling two bales make sure the first bale is as far forward as possible (Fig. 1). Carrying a bale behind the bed (Fig. 2) places excessive stress on the cylinder, linkage, and pins.**

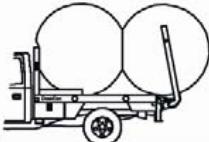

Fig. 1

Fig. 2

### CAUTION

**Do not exceed the GVRW of the truck.**

### Unloading Instructions

- To unload one bale, push the IN button to maintain squeeze pressure. Push the DOWN button to lower the bale. Once bale is on the ground push the OUT button to release pressure.
- When unloading 2 bales, unload first bale as stated above. Raise arms to remaining bale on truck. Squeeze the bale as close to center as possible. To get a center grip on bale you may need to release the bale and squeeze it again near the center of the bale while it is still on the truck bed.

**NOTE:** When hauling multiple bales short distances, motor will become hot. Allow motor to cool down in between loading cycles. General rule of thumb is 25% motor on, 75% motor off. This equals about 2 ½ minutes “motor on” in a 10 minute period. Opening the tool box lid may help with the cool down.

### Unrolling Instructions

- Position the spinner in the center of the bale.
- Lift the bale off the ground and cut the wrap/string off.
- Lower the bale to make contact with the ground.
- Slowly drive forward letting the ground contact to unroll the bale.
- Bump the down switch to maintain ground contact with the bale.

### Storing Of Arms

- Raise arms up to bed. Arms must touch bed before bringing arms to down position. Squeeze to stop.

### Arm Bed Winter Use

Keep pivot area clear of debris (hay, foreign material, etc...). Check periodically. Clear if necessary. Frozen hay and debris can cause excessive pressure put on metal parts resulting in operational issues.

## Maintenance

### Check Daily or Before Use

- Check the hydraulic oil level. Keep the level to “FULL” on the dipstick.
- Examine the hydraulic hoses for leaks with an object such as cardboard.

### SAFETY WARNING!

**Hydraulic fluid escaping under pressure can penetrate the skin and may cause death if not treated immediately.**

### Lubrication

- Grease all (6) zerks once a week or more often during heavy use to keep arm bed operating at its best.
- Grease arms, spinners, and pivots as shown in the picture below.

### SAFETY WARNING!

**Use extreme caution when greasing the flatbed. Completely lower arms to expose rear zerks and turn off ignition.**

(2) one on each spinner

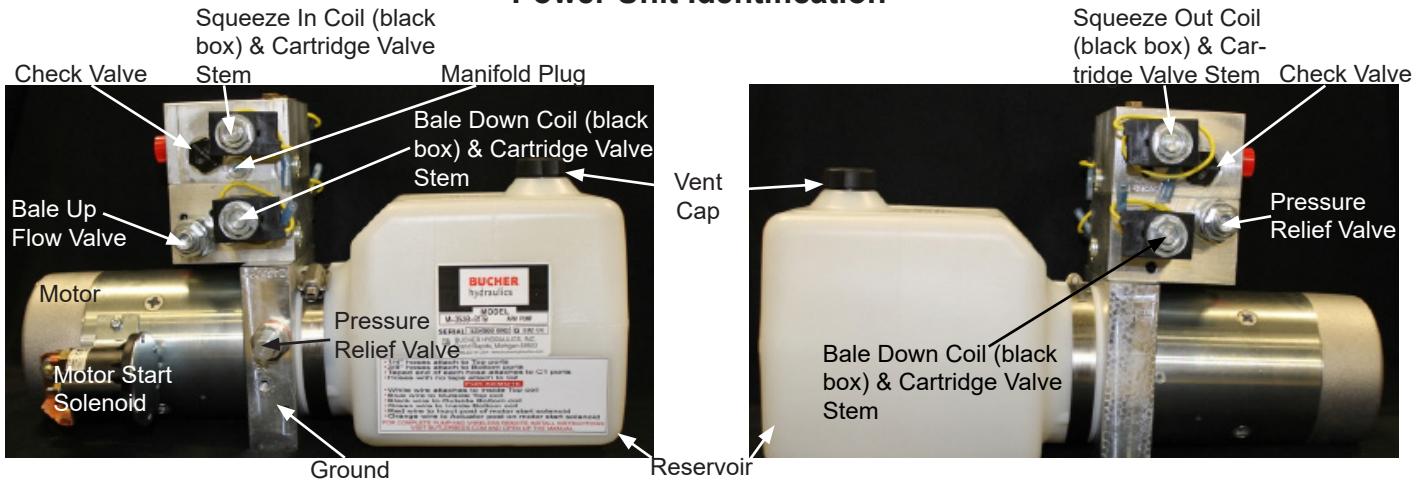

## Toolbox Mounting

- Mount the box with the two bolt holes on the short end towards the front. Bolt the top of box to the welded bracket under the bed. All bolts are 3/8".

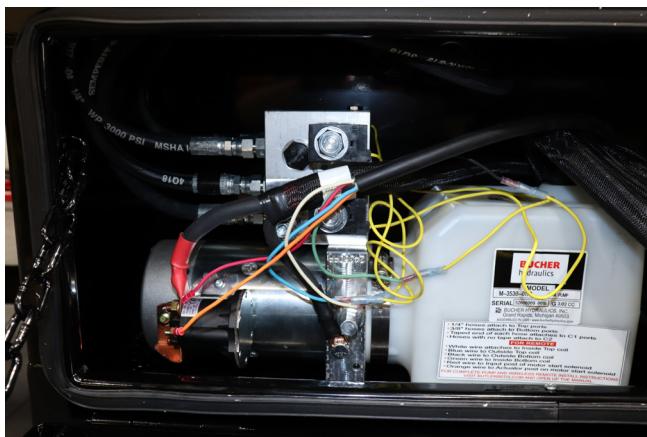

## Power Unit Identification

## Mounting of Power Unit

Place power unit in passenger side box with the reservoir facing the cab of the truck. Position the holes in bottom of pump block over holes in bottom of box. Using 3/8" bolts, secure the pump to the box. Run the hydraulic hoses through the rubber grommet in the box. The power unit operates best with a two battery set up. If needed, the second battery can be mounted next to the power unit in the tool box.

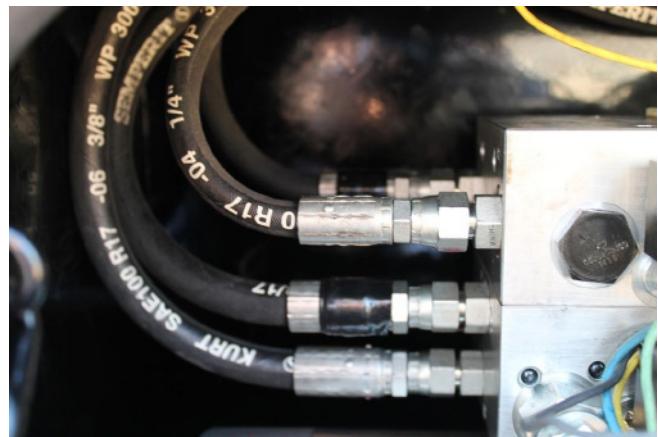

## Hydraulics

### Hydraulic System

- If the quick-couplers leak, the o-rings may need to be replaced.
- High heat, 190° or greater, can be damaging to the hydraulic system. Check various parts of the system to make sure there are no "hot spots" which may indicate a problem.
- In the off season, run the bed at least twice a month to prevent valve condensation.
- For easy hookup of the couplers, turn the pump switch off and activate the control valve switches with the ignition on. This will release pressure in the lines.

### Hydraulic Hose Connections

- 1/4" Hoses (squeeze) attach to top valve body. Taped hose screws into C1.
- 3/8" Hoses (lift) attach to bottom valve body. Taped hose screws into C1.
- After filling with ATF, synchronize arms (Arm Bed) and remove air from lines (Arm & Spike Bed). See Trouble Shooting.

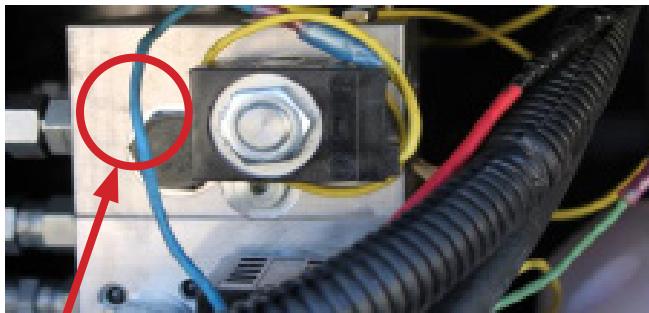

# Corded/Wireless Remotes

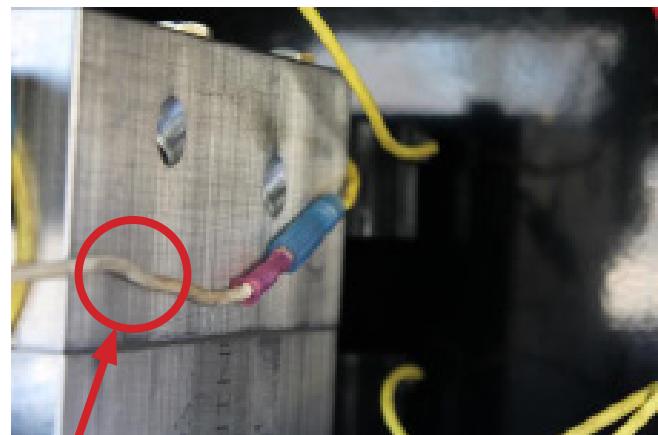

## Wiring Instructions/Corded Remote Arm Bed

- See parts page 1.6 for more detail.
- Blue wire attaches to the top outside manifold coil. This is the “OUT” on the arm wired remote.
- White wire attaches to the top inside manifold coil. This is the “IN” on the arm wired remote.
- Black wire attaches to the bottom outside manifold coil wire mates. This is the “DOWN” on the arm wired remote.
- Green wire attaches to the bottom inside manifold coil. This is the “UP” on the arm wired remote.
- Red wire attaches to the input on the motor start solenoid along with the red battery cable.
- Orange wire attaches to the actuator (small post) on the motor start solenoid.
- The black battery cable connects to bottom of pump block. Note: Scratch surface paint on box for proper grounding. Some trucks may require ground wire run all the way to the battery to establish grounding.

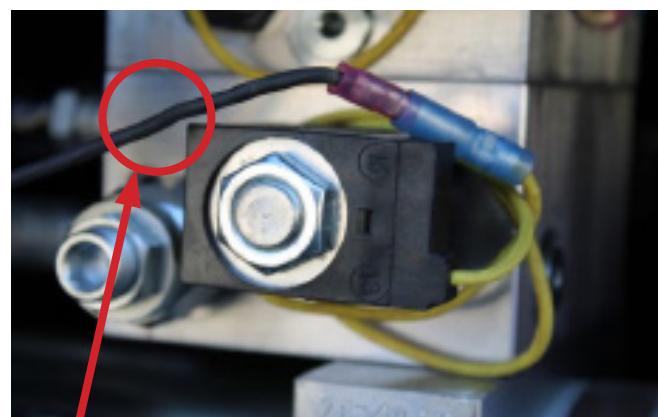

**Note: When wiring, inside coils are facing back of box. Outside coils are facing tool box lid.**

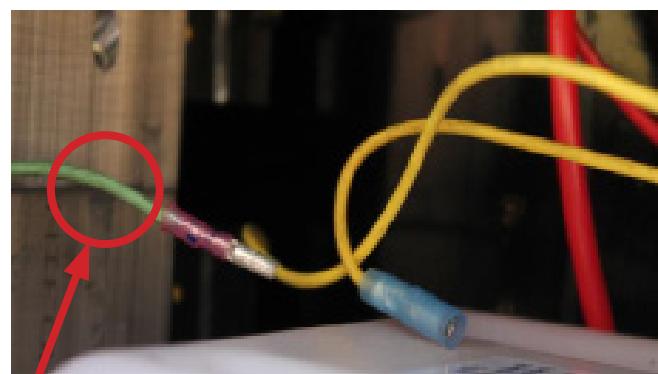

Blue wire attaches to the top outside manifold coil.

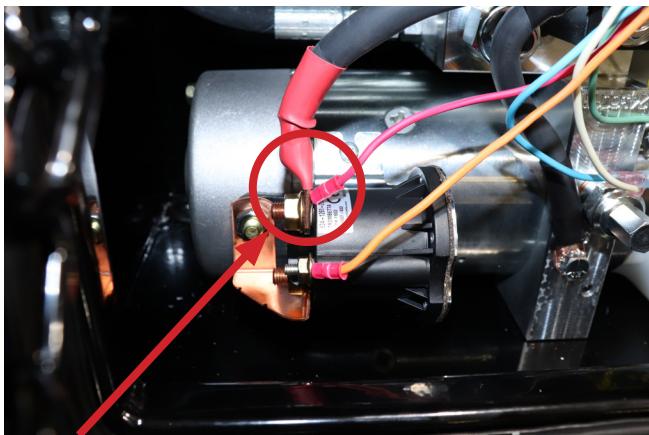

White wire attaches to the top inside manifold coil.

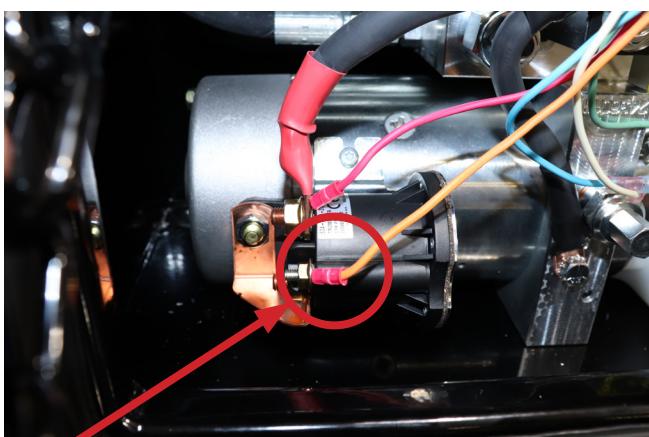

Black wire attaches to the bottom outside manifold coil.

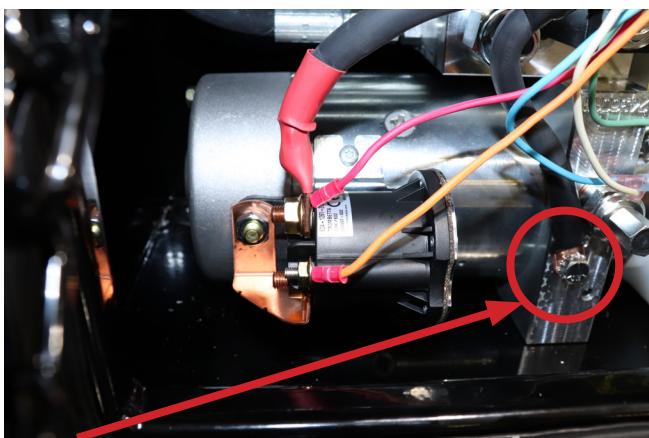

Green wire attaches to the bottom inside manifold coil.

Red battery cable attaches to input of motor start solenoid.

Orange wire attaches to the actuator (small post) on the motor start solenoid.

Ground wire attaches to the bottom of the pump block.

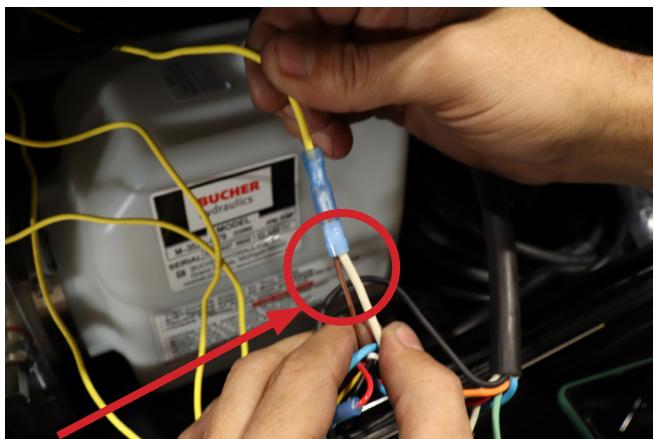

## Wiring Instructions / Wireless Remote Arm Bed (optional)

- See parts page 1.5 for more detail.
- Blue wire attaches to top outside manifold coil. (butt splice with blue hand control wire)
- Brown wire attaches to top inside manifold coil. (butt splice with white hand control wire)
- Green wire attaches to bottom outside manifold coil. (butt splice with black hand control wire)
- Yellow wire attaches to bottom inside manifold coil. (butt splice with green hand control wire)
- Black wire attaches to bottom of block.
- Red wire attaches to in-line 15 amp resettable/replaceable fuse.
- White wire attaches to orange wire that connects to the actuator on motor start solenoid. (butt splice with orange wire)
- 15 amp resettable/replaceable fuse connects to input on motor start solenoid.

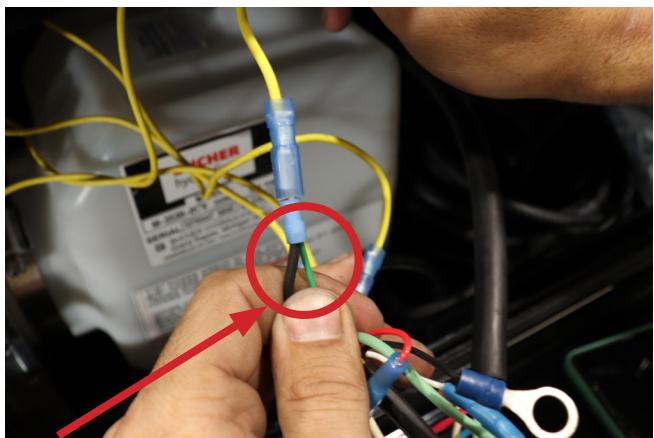

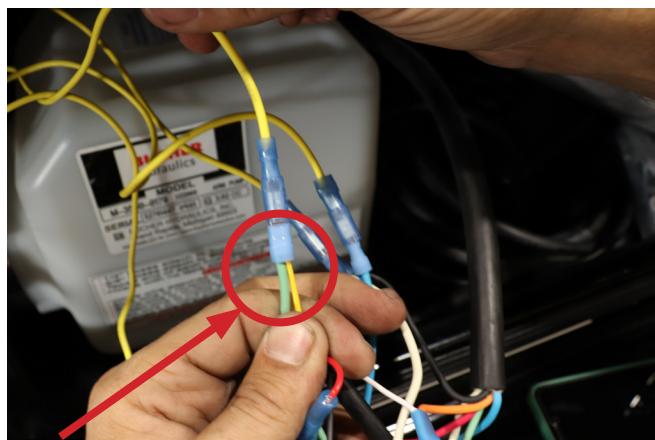

Blue wire attaches to top outside manifold coil.

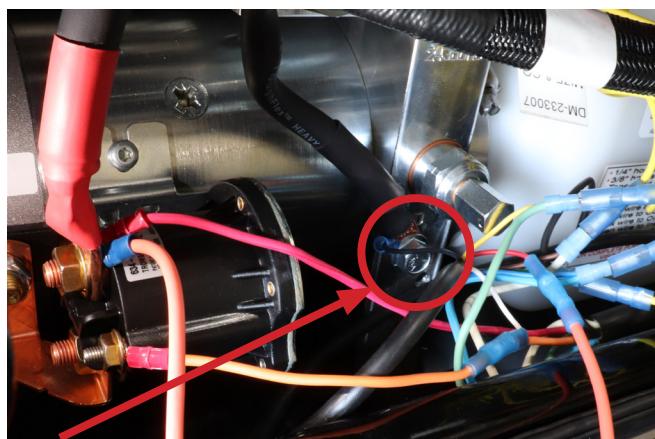

Brown wire attaches to top inside manifold coil.

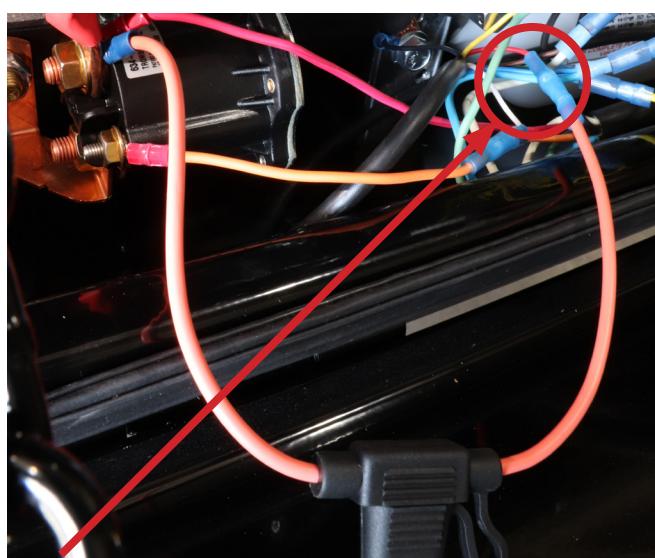

Green wire attaches to bottom outside manifold coil.

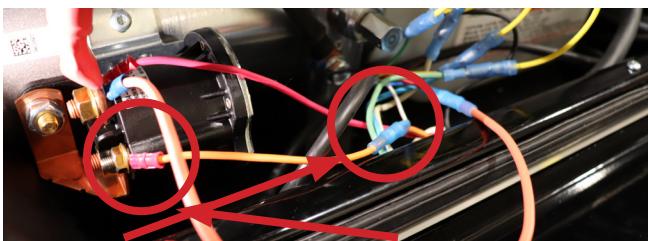

Yellow wire attaches to bottom inside manifold coil.

Black wire attaches to bottom of block.

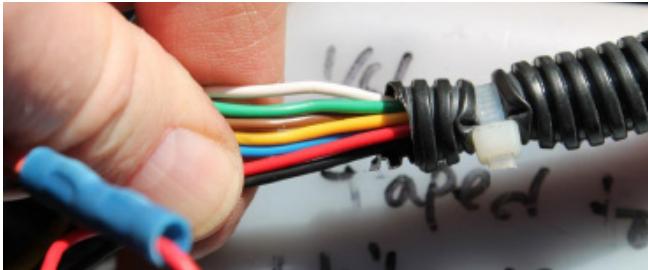

Red wire attaches to in-line 15 amp resettable/replaceable fuse.

White wire attaches to orange wire the connects to the actuator on motor start solenoid.

15 amp resettable/replaceable fuse attaches to input on motor start solenoid.

All seven wires.

If the transmitter does not function when turned on for the first time, disconnect the power supply to the receiver that's mounted inside the tool box and then reconnect. This opens a 20 second window for registration. When you see the LED light flashing inside the receiver, PRESS and HOLD the green button on the transmitter (remote) and the F1 button. Continue to hold BOTH buttons for a minimum of 5 seconds during the 20 second period. Keep holding down buttons and if the transmitter is successfully registered, you will see the LED light illuminate solid for 3 seconds. First release the F1 button and then the green button within the 3 second period.

### Mega Fuse & Fuse Box

The 250 amp (arm bed) or the 200 amp (spike bed), Mega Fuse and fuse box should be installed on the power cable

## Spikes in Crosstube

It is important when using the Arm Bed with Spikes in the crosstube, that the Spikes be parallel with the ground when spiking a bale. Failure to do so can result in structural damage to the bed. Refer to pictures to show correct & incorrect spike positions.

**Note: Harper Industries, Inc. warrants each purchaser of a new Butler Bed from an authorized dealer or representative, that such equipment is free of manufacturer's defects in workmanship and materials which appear while in normal service for a period of ONE YEAR commencing with delivery to the original user. Structural damage due from incorrect spike position will NOT be warrantied by Harper Industries.**

### Result of Incorrect Spike

Correct Spike Position

Correct Spike Position

Incorrect Spike Position

Incorrect Spike Position

## Troubleshooting

**The most common problems with a power unit are due to low voltage from a battery, fuse failure, faulty wire or a failing ground connection. To narrow down the problem, connect jumper cables to the pump (positive to input side of solenoid & negative to the ground on pump base). Use a separate good battery (from another vehicle or a new battery). If the pump and bed operate properly, then have the battery tested, check in line fuse and power cord, and/or run ground cable directly to the battery instead of inside the tool box or frame. If the pump does not operate properly with jumper cables, then check solenoid and/or motor.**

PROBLEM	SOLUTION
Power unit not responding to remote when toggle is activated	Use test light on remote connections to solenoid. If any connections are not working, the problem is in the remote. If all connections are working, check solenoid. If solenoid is working properly, the problem is in the pump motor.
Motor is humming or bed is operating slowly	Pump motor is failing.
One of the four operations is not working. Example: bed will lift, lower and squeeze in but will not squeeze out	Check wire on cartridge valve coil for a short or take coil off and activate remote while putting a screwdriver inside coil. If screwdriver does not magnetize to coil, the coil is failing. If coil is magnetizing, then failure is in cartridge valve.
Arm Bed arms are not moving in unison (synchronized) (The most common problem after hoses are replaced.)	1. Squeeze arms together above the welded stops. Assist the arms by hand if needed until they are both at maximum squeeze point. Hold toggle active for 20 seconds in order to clear air from lines. 2. Check rubber bumpers that are on each arm on the opposite side of cylinder hook up point.
Bale drops on its own when suspended in the air or will not maintain a tight squeeze	Turn the counter-balance valve $\frac{1}{4}$ turn clockwise until bale suspends normally. Do not tighten screw all the way in.
Arms pivot are not moving fast / pressurizing but not moving	Check for debris in the check valve. Make sure spring plunger is not broken.

PROBLEM	SOLUTION
Bed will not lift heavier bales/arms will not release bale when suspended in air	Turn the counter-balance valve $\frac{1}{4}$ turns clockwise until bale lifts properly. Do not tighten screw all the way in. If problem persists, turn pressure relief set screw in $\frac{1}{4}$ turn clockwise until bale lifts properly. Do not tighten screw all the way in. If problem still persists then power unit is failing.
Bale shutters or falls too fast	Turn the counter-balance valve $\frac{1}{4}$ turn clockwise until bale goes down properly. Do not tighten screw all the way in.
Bale goes down too fast	Turn counter-balance valve $\frac{1}{4}$ turn counter clockwise until desired speed is achieved. If bale starts to shutter/go down too fast, turn same screw clockwise $\frac{1}{4}$ turn.
Fluid leaking under bed or in tool box	Check hose connection at leak. Tighten or replace if needed. Leaks in tool box are best diagnosed by activating the remote while watching the power unit. Determine where the leak is coming from and replace O-ring / plug / valve if needed. Some leaks are fixed by tightening the plug/valve. Make sure the plastic reservoir is not cracked.

### How to Check

Solenoid	Check the two posts. If posts show voltage, then the solenoid is good.
Pump	Make sure there is good voltage to the motor. If motor checks out good check for broken or worn gear. If there is a grinding or metallic noise, the pump needs to be replaced.
Motor	Check amp range using chart below. Arm & spike beds draw different amps at different pressures.

## Amp Draw

PSI	Arm Amps Draw
50	96
250	114
500	137
750	159
1000	180
1250	201
1500	221
1750	241
2000	260
2250	279
2500	297
2750	315
3000	332

**NOTE:** The power unit is configured from the factory to lift heavier bales. To adjust the speed of pump for lighter bales, the counter-balance valve can be adjusted. To make an adjustment, turn the counter-balance valve set screw counter clockwise until bale will not lift, and then turn the same screw clockwise by  $\frac{1}{4}$  turns until bale is lifting properly multiple times.

## Hydraulic Hoses

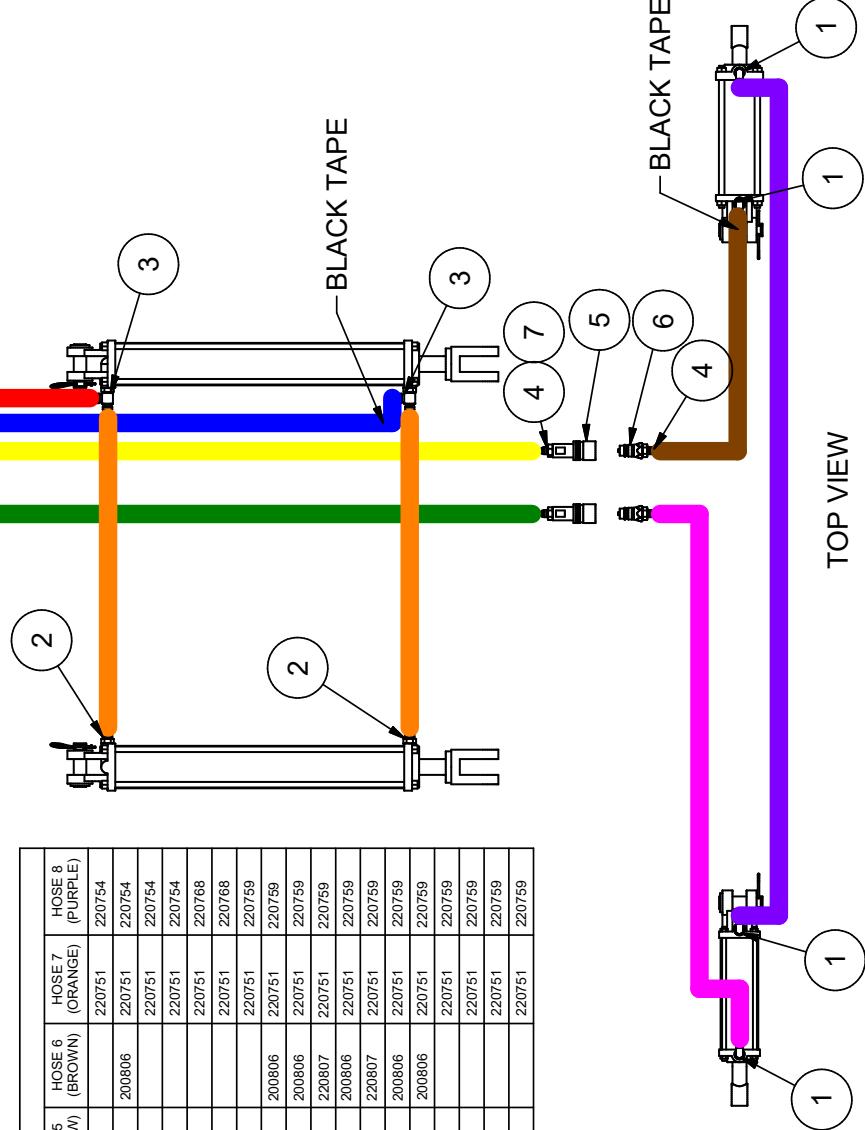

## HOSES MANUAL

WHEN USING COUPLERS CARE MUST BE TAKEN TO NOT MIX OILS WITH ATTACHMENTS. ISO 46 IS RECOMMENDED.  
PUMP SHOULD ONLY BE RAN CONTINUOUSLY 2 MINUTES OUT OF EVERY 10 MINUTES.

DO NOT USE WITH LARGE HYDRAULIC CYLINDERS WHERE THE DIFFERENTIAL VOLUME BETWEEN THE ROD END AND THE BASE END IS LARGER THAN 0.5 GALLONS. THE PUMP RESERVOIR CAPACITY IS ONLY 0.87 GALLONS AND USING COUPLERS WITH LARGE CYLINDERS COULD LEAD TO PUMP STARVATION.

HOSE TABLE
